

For windows user :

# create a folder

# go inside the folder

# right click inside the folder -> show more options (if using windows 11) -> click open git bash here

A black screen will appear in front of u

A screenshot of a Windows terminal window. The title bar at the top reads "MINGW64:/c/Users/aksha/OneDrive/Desktop/project-code". The terminal area has a black background with text in green and yellow. The first line shows the prompt "aksha@LAPTOP-SQEMF6TV" in green, followed by "MINGW64" in yellow, and the path "~/OneDrive/Desktop/project-code" in yellow. The second line shows a single dollar sign "\$" in green, indicating the shell prompt.

```
MINGW64:/c/Users/aksha/OneDrive/Desktop/project-code
aksha@LAPTOP-SQEMF6TV MINGW64 ~/OneDrive/Desktop/project-code
$
```

# if you are working on ubuntu OS (ec2)

sudo su

apt update

apt install git -y

mkdir project-code

cd project-code

# we need to initialize this folder/directory as git folder because i need to save the code which is present in this folder as a version

git init ✓

if u dont run git init you will not be able to run any git based commands and will not be able to save code as version in this folder

```
aksha@LAPTOP-SQEMF6TV MINGW64 ~/OneDrive/Desktop/project-code
$ git init
Initialized empty Git repository in C:/Users/aksha/OneDrive/Desktop/project-code/.git/
aksha@LAPTOP-SQEMF6TV MINGW64 ~/OneDrive/Desktop/project-code (master)
$
```

now lets create a file with name index.html with content hello world

vi index.html ✓

press i

hello world

press esc :wq

① By default git will not track your files.

index.html  
(hello world)

→ If we make any changes to the file git will keep telling you that file is untracked  
(git status)

```
$ git status
On branch master

No commits yet

Untracked files:
  (use "git add <file>..." to include in what will be committed)
        index.html
```

② we will start tracking the file. <sup>command</sup> git add filename. in which we will tell the git that index.html file has hello world as content. Start tracking the content. Now if you make any changes to content of file git will immediately tell you.

```

aksha@LAPTOP-SQEMF6TV MINGW64 ~/OneDrive/Desktop/proj
$ git add index.html
warning: in the working copy of 'index.html', LF will
ouches it

aksha@LAPTOP-SQEMF6TV MINGW64 ~/OneDrive/Desktop/proj
$ git status
On branch master

No commits yet

Changes to be committed:
  (use "git rm --cached <file>..." to unstage)
    new file:   index.html

```

start tracking  
index.html

green color means  
git is tracking content of  
file.

now lets make some changes in index.html file and lets see if git is able to tell that there is some difference in the file content

```

vi index.html
hello world
hi akshat

```

add this line.

```

aksha@LAPTOP-SQEMF6TV MINGW64 ~/OneDrive/Desktop/project-code (master)
$ vi index.html

aksha@LAPTOP-SQEMF6TV MINGW64 ~/OneDrive/Desktop/project-code (master)
$ git status
On branch master

No commits yet

Changes to be committed:
  (use "git rm --cached <file>..." to unstage)
    new file:   index.html

Changes not staged for commit:
  (use "git add <file>..." to update what will be committed)
  (use "git restore <file>..." to discard changes in working directory)
    modified:   index.html

```

hello world

hello world  
hi akshat
